

IN THE SPECIFICATION

Please amend the specification as follows:

Replace the paragraph on page 5, between lines 27-31 of the specification with the following:

The circuit further includes a switch 15 connected between the power supply circuit and the IR lamp 8, for connecting the IR lamp 8 to the power supply separately from the UV lamp 7. This allows the user to enjoy the warmth of IR radiation also without being exposed to UV radiation (which can be endured without causing a sunburn for a limited period of time only).
